Wireless Motorized betweenglassblinds®

Privacy Glass Solutions™ Wireless Motorized BetweenGlassBlinds® can be automatically raised and lowered to improve the comfort and convenience in any area.

Wireless Motorized BetweenGlassBlinds® are double-glazed units, complete with fully integrated Venetian blinds, which are hermetically sealed between two panes of glass. Simple to maintain, the blinds contained within the sealed unit are safe from dust and dirt.

All units are cordless and are operated via a smooth, easy-to-use wireless remote control. The blinds can be raised and lowered and the slats of blinds may be tilted to control privacy or the amount of light entering a room.

The product is powered by a Lithium Battery Power Supply, which is equivalent to the voltage of a mobile phone. Each unit includes one Lithium Battery Power Supply, which can be positioned anywhere along the perimeter of the unit. The rechargeable batteries are charged with a normal USB charging wire.

BENEFITS

- No cutting or drilling required
- Easy to fit and install
- Fits into any frame
- No special cleaning needed
- Hermetically sealed - Infection Control
- 10 Year warranty
- No control knobs, thumb wheels or crankshaft
