Patent Pending

betweenglassblinds®

BetweenGlassBlinds® are an innovative integral blind system, offering maintenance-free and customizable observation control windows for virtually any application.

BetweenGlassBlinds, 100% designed, engineered, and assembled in the USA, are both stylish and contemporary in appearance. They are double-glazed units, complete with fully integrated Venetian blinds, hermetically sealed between two panes of glass. They allow for an open plan feel while still ensuring privacy when needed.

BetweenGlassBlinds are simple to maintain, as the blinds contained within the sealed unit are safe from dust and dirt. All units are cordless and are operated via a smooth, easy-to-use sliding magnet or remote control.

BetweenGlassBlinds are the first glass encased operable blind unit in the industry to pass Insulated Windows Large Missile Level D and E Testing.

Large Missile Level D is the most common test and represents "large missile impact" known to protect against the strongest of hurricanes. Large Missile Level E is an enhanced impact protection rating and is specified in buildings and structures deemed as essential facilities, such as hospitals, fire rescue, police stations, emergency shelters, etc.

BENEFITS

- No cutting or drilling required
- Easy to fit and install
